

**Cayenne Closes \$15 Million Series C Financing
Fast-Growing Sports Medicine Company Completes Successful Round**

SCOTTSDALE, AZ - March 6, 2008 - Cayenne Medical, Inc., a privately held sports medicine company based in Scottsdale, Arizona announced today that it has closed a \$15 million Series C financing led by Investor Growth Capital (“IGC”). Other participating investors include SplitRock Partners, MB Venture Partners and a group of accredited private individuals. Stephen M. Campe, Managing Director of IGC, has joined Cayenne's Board in connection with the financing. This financing round brings Cayenne's total private equity investment to \$32 million.

Cayenne's lead product, the AperFix™ System for ACL reconstruction, enables surgeons to perform a revolutionary surgical procedure resulting in total repair of the ACL. The AperFix System, which is intuitive to use and easy to teach, addresses limitations of other existing ACL reconstruction products. This financing follows last week's announcement that Cayenne has received market clearance from the U.S. Food and Drug Administration (FDA) for its iFix™ Interference Screw System for use in bone-tendon-bone ACL reconstruction procedures. The iFix Interference Screws are the first FDA-approved screws for the ACL repair market that are manufactured using polyetheretherketone (PEEK™), a highly biocompatible, biomechanically strong and radiolucent material.

“This successful round of financing will enable us to expand our sales and distribution footprint and further support the continued roll-out of our AperFix System,” said James W. Hart, President and CEO of Cayenne Medical. “In addition, we remain committed to serving our growing physician customer base by developing and commercializing a full line of sports medicine products.”

“The AperFix system is a novel device that affords physicians and patients a fast and elegant solution for soft tissue ACL fixation and may also be a facilitator of emerging surgical techniques,” said Steve Campe of Investor Growth Capital. “We believe Cayenne's strong development capabilities and innovative product offerings will enable the Company to achieve a position as a leading sports medicine platform.”

“More than 400 surgeons have used the AperFix System and our strong reusage rates reflect physicians' continued enthusiasm for our products,” added Hart.
